TASKS OF CLIENT SIDE TECHNOLOGIES

MY FIRST HTML WEBPAGE

Objective: Create a simple HTML webpage from scratch to practice the **basic HTML structure, headings, paragraphs, text formatting, superscript, and subscript tags** learned in the lecture.

- **Step 1: Create the HTML File named** index.html and
- **Step 2:** Create the Basic HTML Structure with title **My First Web Page.**
- **Step 3:** Add the Main Heading **Welcome to My First Web Page.**
- **Step 4: Add an Introduction Paragraph:** Create a paragraph containing your basic introduction. Include: Name, Course, University, Favorite subject, Hobby, Career goal.
- **Step 5: Practice Heading Tags,** Paragraphs, break, horizontal Rule.
- **Step 6: Practice Text Formatting:** Create **one paragraph** that uses all five formatting elements.
- **Step 7: Practical Task for** Superscript and Subscript.
  - Display $a^2 + b^2 = c^2$, $(a + b)^2 = a^2 + 2ab + b^2$, CO_2, $C_6H_{12}O_6$
- **Step 8: Practical Task for** Superscript + Subscript.
  - Display: $\mathbf{x_1^2 + x_2^2}$, CO_2^{2-}

MY COLLEGE LIFE WEBPAGE USING LISTS

Create a "My College Life" Webpage

Create an HTML web page named college.html with the title **My College Life** and a short introduction about yourself.

Lists Requirements

1. Ordered List – Daily Routine

- Create an ordered list of 5 daily activities.
- Use uppercase letters for numbering.

2. Unordered List – Favorite Things

- Create an unordered list of 5 favorite things.
- Use square bullets

3. Nested List – Favorite Subjects

- Create an ordered list of 3 favorite subjects.
- Under each subject,
  - create an unordered list containing 2 related topics.

4. Mixed List – College Activities

- Create an unordered list of 3 categories.
- Under each category,
  - create an ordered list of 3 items.

5. Description List – College Terminology

- Create a description list containing at least 5 college-related terms and their descriptions.

Add a horizontal line (<hr>) between the different list sections. Use suitable headings for each list section.

FOOD MENU WITH IMAGES

Create a web page titled My Restaurant Menu.

Requirements: Create following data on page.

Introduction: Write a paragraph about your restaurant.

Starters: Use an unordered list.

Main Course: Use an ordered list.

Categories: Create a nested list.

Images: Add at least 5 images.

Background: Use a suitable food-related background image.

CREATE A "MY COLLEGE" WEBPAGE USING IMAGES

- **Create a web page titled My College.**
- **Introduction:** Write a paragraph introducing your college.
- **Courses:** Create an unordered list of 5 courses offered by the college.
- **Departments:** Create an ordered list of 5 departments.
- **Subjects:** Create a nested list where each department contains 2–3 subjects.
- **Facilities:** Create a description list containing facilities and their descriptions.
  - Library → A place where students can read and borrow books.
  - Laboratory → A place where students perform practical work.
  - Cafeteria → A place where students can have food.
- **Images:** Add at least 4 images related to college life. Add a suitable college/campus image as the background.
- **Links:** Add external links to College website.
- **Bookmarks:** Create navigation links for: About College, Courses, Departments, Facilities, Contact.
- Add "Back to Top" links

CREATE A MINI TRAVEL WEBSITE

Create a multi-page Travel Website using HTML. The website should contain different pages connected to each other using hyperlinks.

Create a folder named: **ExploreIndia.** Inside the folder, create these HTML files index.html, destinations.html, foods.html, places.html, gallery.html, contact.html. Also create an images folder.

Page 1: Home Page – index.html

- **Page Title:** Explore India.
- **Main Heading:** Welcome to Explore India
- **Introduction:** Write a paragraph introducing India as a travel destination.
- Use text formatting tags such as: <b>, , <i>, , <u>.
- **Add an Image:** Add one suitable India/travel image using: <img>. Add a Background Image: Set a suitable image as the background of the page.
- **Create Navigation Links:** Create links to all other pages:
  - Home | Destinations | Foods | Places | Gallery | Contact

CREATE A MINI TRAVEL WEBSITE

Page 2: Destinations – destinations.html: Create a page containing popular Indian destinations.

- **Heading:** Popular Destinations in India
- **Ordered List:** Create an ordered list of 5 popular destinations. Example: Delhi, Goa, Manali, Jaipur.
- **Unordered List:** Create a list of 5 things to carry while travelling.
- **Nested List:** Create a nested list like: Delhi: India Gate, Red Fort, Qutub Minar.
- **Add Images:** Add at least 3 destination images.
- **Add Internal Page Links:** Add links to: Home, Foods, Places, Gallery, Contact.
- **Add a Bookmark:** At the bottom of the page, create: Back to Top.

Page 3: Indian Foods – foods.html: Create a page about famous Indian foods.

- **Heading:** Famous Indian Foods
- **Introduction:** Write a paragraph about Indian cuisine.
- **Ordered List:** Create a list of 5 famous Indian dishes.
- **Unordered List:** Create categories such as: North Indian, South Indian, Street Food, Desserts.
- **Description List:** Create a description list for at least 3 dishes.
- Add at least 3 food images. Add links to other pages.

CREATE A MINI TRAVEL WEBSITE

Page 4: Famous Places – places.html

- Add information about at least 5 places.
- For each place: Place name as a heading, Short description, Image.
- Add External Links: Add links to useful external websites.
- For example: Learn More About India, Visit Incredible India
- Also add a Back to Home link.

Page 5: Gallery – gallery.html: Create a travel photo gallery.

- Add at least 6 images.
- Organize the images under headings such as: Beaches, Mountains, Historical Places, Cities.
- Add links to all other pages.

Page 6: Contact – contact.html: Create a simple contact page.

- **Heading:** Contact Us
- **Contact Information:** Email, Phone, Address.
- **Add links to:** Home, Destinations, Foods, Places, Gallery

INTERACTIVE RESTAURANT MENU USING IMAGE MAP

Create an **Interactive Restaurant Menu** webpage using an image map. The web page should contain a food image with different food items, and make specific parts of the image clickable using the image-map shapes: circle, rect, poly, default.

When a user clicks on a food item, it should open a different webpage containing information about that item.

Minimum Shape Requirement:

- 2 circle areas
- 2 rect areas
- 2 poly areas
- 1 default area
- Each specific clickable area must have a different href link
- Use appropriate alt text for every clickable area
- Use target="_blank" where required

INTERACTIVE RESTAURANT MENU USING IMAGE MAP

Create the following clickable areas:

Food Item	Shape
Pizza	circle
Burger	circle
French Fries	rect
Menu Card	rect
Sandwich	poly
Cake Slice	poly
Remaining/Other Area	default

WORLD MAP EXPLORER

Create a web page titled **“World Map Explorer”** to demonstrate the use of HTML **Image Maps and Hyperlinks**. You will use the **<img>, <map>, and <area>** tags to make different countries on a world map clickable. Link each country to a different information page. For each country:

- Use an appropriate shape.
- Provide the required coords.
- Add an href to an external webpage.
- Add an alt attribute describing the clickable region.
- Use target="_blank" so the information opens in a new tab.

To demonstrate different types of image-map regions, create clickable areas using:

- circle – for a circular region
- rect – for a rectangular region
- poly – for an irregular/polygon-shaped region
- default – understand how the default area works

CLASS TIME TABLE

Create a web page titled **"Class Time Table"** that uses an HTML table to display a weekly class schedule. The table should contain:

- Days of the week as rows
- Time slots as columns
- Subjects in the corresponding cells

Requirements: Your timetable must use:

- <table>
- <tr>
- <th>
- <td>
- border
- cellpadding
- cellspacing

STUDENT MARKS TABLE USING ROWSPAN AND COLSPAN

Create a web page titled: **Student Examination Result.** Your table should contain:

- Student Name
- Roll Number
- Subjects: Science, Maths, English
- Total
- Result

Requirements: Use:

- border
- cellpadding, cellspacing
- alignment
- rowspan, colspan

Student Examination Result

S. No.	Student Name	Roll Number	Subjects			Total	Result
			Science	Maths	English		
1	Aarav Sharma	101	85	90	78	253	Pass
2	Neha Gupta	102	92	88	95	275	Pass
3	Rohan Mehta	103	76	82	70	228	Pass
4	Sneha Verma	104	68	74	72	214	Fail
5	Karan Singh	105	88	93	85	266	Pass
Class Average			**81.8**	**85.4**	**80.0**	**247.2**	-

RESTAURANT MENU

Design a web page titled **"Restaurant Menu"** using an HTML table to organize food categories, food items, and prices. Each category should contain **at least 3 food items** with their prices. The table should contain the categories:

- Starters
- Main Course
- Desserts
- Drinks

Requirements: Use:

- border, cellpadding, cellspacing
- alignment
- rowspan, colspan
- caption

Today's Special Menu

Category	Food Item	Price (₹)
Starters	Spring Rolls	120
	Garlic Bread	100
	Veg Soup	80
Main Course	Paneer Butter Masala	180
	Veg Biryani	150
	Dal Tadka	120
Desserts	Chocolate Cake	90
	Ice Cream	70
	Gulab Jamun	60
Drinks	Fresh Lime Soda	50
	Cold Coffee	80
	Mango Shake	70

TASKS FOR NESTED TABLE

Create a web page titled **“Nested Tables”** and design the following tables using HTML nested tables.

Task 1: Employee Salary Slip: Create a table **"Employee Salary Slip".**

Task 2: Student Profile & Marks: Create a table **"Student Profile & Marks”.**

Task 3: Product Order Summary: Create a table **"Product Order Summary".**

Task 4: Hotel Booking: Create a table **"Hotel Booking".**

Create all four tables by referring to the given images.

Requirements:

- Create each table according to the given reference images.
- Use a nested table wherever shown in the reference.
- Apply appropriate borders, alignment, rowspan, colspan, cellpadding, and cellspacing.
- Maintain the same overall structure and arrangement as the given tables.

1 Employee Salary Slip (Nested Table)

Employee ID	EMP202
Employee Name	Pooja Sharma
Department	Finance
Designation	Accountant
Month	August 2025
Salary Details	

Earnings		Deductions	
Item	**Amount**	**Item**	**Amount**
Basic Pay	₹28,000	PF	₹2,000
HRA	₹7,000	Tax	₹1,800
DA	₹4,000	Loan	₹1,000
Total Earnings	**₹39,000**	**Total Deductions**	**₹4,800**

Net Salary	₹34,200

2 Student Profile & Marks (Nested Table)

Student Name	Ritika Verma
Roll Number	1023
Class	BCA - 2nd Year
Details	

Subject	Marks	Grade
Computer Networks	88	A
Web Technologies	85	A
Database Management	92	A+
Discrete Mathematics	78	B+

3 Product Order Summary (Nested Table)

Order ID	ORD4578
Customer Name	Amanpreet Kaur
Order Date	12-09-2025
Order Items	

Product	Quantity	Price (₹)	Amount (₹)
Laptop	1	45,000	45,000
Mouse	1	1,200	1,200
Backpack	1	2,500	2,500
Total Amount			**48,700**

4 Hotel Booking (Nested Table)

Guest Name	Simran Kaur
Booking ID	HBK7890
Room Type	Deluxe Room
Booking Details	

Check-in Date	Check-out Date	Guests	Charges (₹)
15-10-2025	18-10-2025	2	7,500
Total Charges			**7,500**

Online Course Registration Form

Create a web page titled **“Online Course Registration”** for a training institute where students can register for an online course. The form should collect the student's personal information, course preferences, additional details, and supporting document.

Tasks:

Task 1: Create a form using the <form> tag with appropriate action, target attributes.

Task 2: Add fields for **Student Name, Email Address, Mobile Number, Age, and Password** using appropriate input types.

Task 3: Use <label> elements for all form controls and correctly associate each label with its corresponding input using the for and id attributes.

Task 4: Add **Gender** using radio buttons with options such as **Male, Female, and Other.** Use the same name attribute for all radio buttons so that only one option can be selected.

Task 5: Add **Skills** using checkboxes with options such as **HTML, CSS, JavaScript, and Python** so that students can select multiple skills.

Task 6: Add a **drop-down list** for selecting a **course** from options such as **Web Development, Python Programming, Data Analytics, and Digital Marketing.** Make the course selection mandatory.

Task 7: Add a **hidden input field** with the fixed value **"Online Course Registration".**

Task 8: Add a **Date of Birth** field using the **date** input type and a **Preferred Class Time** field using the **time** input type.

Task 9: Add an **Address/Additional Information** section using a <textarea> for multi-line input.

Task 10: Add a file upload field allowing students to upload a document or photograph.

Task 11: Use form attributes such as **placeholder, value, and required** wherever appropriate. Make important fields such as **Student Name, Email, Mobile Number, Password, Gender, and Course mandatory.**

Task 12: Add **Submit and Reset** controls at the end of the form using the <input> element with appropriate input types.

Readers' Haven – Book Registration & Order Form

Create a web page titled **“Readers’ Haven – Book Registration & Order Form”** for an online bookstore. The form should allow customers to register their details and place a book order by providing personal information, book preferences, payment details, delivery instructions, and additional information.

Tasks:

Task 1: Create a form using the <form> tag and specify suitable action, and target attributes.

Task 2: Add fields for **Customer Name, Email Address, Mobile Number, Age, and Password** using appropriate input types.

Task 3: Add suitable **placeholder text** to the customer name, email, mobile number, and address-related fields.

Task 4: Add a **Delivery Date** using the date input type and a **Preferred Delivery Time** using the time input type.

Task 5: Add a **Favorite Book Category** using a drop-down list with options such as Fiction, Science, History, and Children’s Books. Make the selection required.

Task 6: Add **Book Title** using a text field and **Quantity** using a number input. Set a suitable minimum quantity.

Task 7: Add **Preferred Payment Method** using radio buttons with options such as Cash on Delivery and Online Payment.

Task 8: Add **Additional Services** using checkboxes, such as: Gift Wrapping, Bookmark

Express Delivery, Greeting Card. Allow the customer to select multiple options.

Task 9: Add a **hidden input field** with the value **"Readers Haven Book Order".**

Task 10: Add a **file upload** field allowing customers to upload a reference image/document if required. Use a suitable accept attribute.

Task 11: Add a **Delivery Address** and **Special Instructions** section using a <textarea>.

Task 12: Add **Submit and Reset** controls using the <button> element.
